# AgenticMobility interaction framework

## Shared execution environment

### Mobility agents

Personal mobility choices

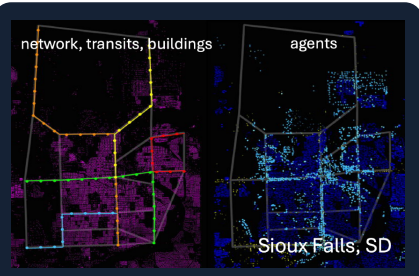

Route and departure time

**Permitted observations**

Own history and memory

Persistent identity and state

Actions

Actions → realized outcomes

Background mobility activity

Actions

### Other agent roles

Shared rules and conditions

e.g., a pricing agent

**Permitted observations**

Own history and memory

Persistent identity and state

**Personal outcomes**

**Public outcomes**

Linked records

### Personal feedback

Update history and memory

### Research archive and analysis

Individual trajectories · Collective patterns

Separate from agent-accessible memory

### Role-specific feedback

Update history and memory

Repeated rounds: observations → validated actions → execution → feedback

Persistent states carry forward; the execution backend is an implementation choice.
